

i-line Stepper

# NSR-SF155

Throughput of More than 200 Wafers per Hour

# High Overlay Accuracy and High Throughput with Skyhook Technology and Higher Speed Wafer Stage

## i-line Stepper NSR-SF155

The NSR-SF155 i-line stepper is suitable for production of a wide range of semiconductor devices. The NSR-SF155 utilizes Skyhook Technology, which enables the projection lens to be suspended from the body and away from the floor, greatly reducing vibration levels. With its increased wafer stage speed, the NSR-SF155 delivers throughput of more than 200 wafers per hour for 300 mm wafers.

### Performance

Resolution	$\leq 280$ nm
NA	0.62
Exposure light source	i-line (365 nm wavelength)
Reduction ratio	1:4
Maximum exposure field	26 mm × 33 mm
Overlay	$\leq 25$ nm
Throughput	$\geq 200$ wafers/hour (300 mm wafer, 76 shots), compatible with 200 mm wafer

### Key Features

#### • Superior Throughput

Combining the optimal stepper platform, Skyhook Technology, and a faster wafer stage has greatly reduced vibration and increased throughput. The NSR-SF155 boasts superior throughput of more than 200 wafers (300 mm) per hour.

#### • High Overlay Accuracy

The NSR-SF155 employs the Skyhook platform and a stage countermeasure which, together with heat countermeasures in the chamber achieved by revising the air conditioning duct layout, result in an overlay accuracy of within 25 nm.

#### Skyhook mechanism

CLASS 1 LASER PRODUCT
