Section 11: Toxicological information

Symptoms related to the physical, chemical and toxicological characteristics;
Information on product:

Skin corrosion/irritation: Causes skin irritation.
Irritating to skin.

Information on ingredients:
Hydrogenated terphenyls

Acute toxicity (oral): Rat LD$_{50}$ = 6,600 mg/kg - 17,500 mg/kg
Acute toxicity (dermal): Rabbit LD$_{50}$ > 2,000 mg/kg
Acute toxicity (inhalation: dust/mist): Rat 4hr-LC$_{50}$ > 4.7 mg/L
Rat 4hr-LC$_{50}$ > 4.3 mg/L (OECD TG 403, GLP)
Skin corrosion/irritation:
In a skin irritation test with rabbits, moderate irritation was observed.

Specific target organ toxicity single exposure:
About humans, there are descriptions that "irritation on an upper respiratory tract and nausea symptoms are present" when aerosol was inhaled, and that "an airway is stimulated"
in the acute inhalation exposure test employing rats", therefore, it classified into Category 3 (Respiratory tract irritation). In addition, the acute oral toxicity tests employing rats (OECD TG 401, GLP) has a description that "control of spontaneous movement, and dirt on hairs by diarrhea, feces and urine were seen with general findings, but necropsy findings were normal in all animals" by 10,000 mg/kg. Moreover, there is a description that "short term exposure effect: eyes, skin, and respiratory tract are stimulated". In a 20-day dermal administration test with rabbits (International Research and Development Corp. method, GLP) it was reported that "at mg/kg there was no systemic toxicity", and in a 90-day oral administration study with rats (OECD TG 408, GLP) it was reported that "there were weight increase in the liver, kidney and adrenal gland (females only) and weight loss in female animals but no toxic effects related to administration of this substance in histopathological studies ". Also, in a 90-day aerosol inhalation exposure test with rats (OECD TG 413, GLP) there is a report of "weight loss, increased liver weight and chromodacryorrhea", and in a 182-day aerosol inhalation exposure test with rats (Industrial Biotest Laboratory, Inc. method) there is a report of "an increase in SGOT, SAP and SGPT, a reduction in BUN and an increase in liver weight".
